Introduction	5
1 A mathematical background: Fourier Theory	10
1.1 Analysis of periodic functions	10
1.1.1 Orthogonal expansions	10
1.1.2 Fourier's theorem	12
1.1.3 Fourier Series	13
1.2 Analysis of non-periodic functions	13
1.2.1 The Fourier Transform (FT)	13
1.2.2 Nyquist–Shannon sampling theorem	15
1.2.3 The 2-dimensional Fourier Transform (2FT)	16
1.2.4 Fourier algorithms: fast and discrete Fourier transforms	16
2 The human eye	18
2.1 The anatomy of the eye	19
2.2 Optical properties of the eye, a quick review	21
2.2.1 The Stiles-Crawford Effect	21
3 Optical systems and Imaging	24
3.1 Optical systems and image formation	24
3.1.1 Pupils in imaging	25
3.1.2 Describing an Imaging System	26
3.1.3 The Wave Equation	28
3.1.4 The Fresnel Approximation	29
3.1.5 The Fraunhofer approximation	30
3.1.6 The Point Spread Function	31
3.2 The lens as a Fourier Transform	32
3.2.1 Defining Fourier's kernel	33

3.2.2	Wave Aberrations	34
4	Simulating cone counting systems in Matlab	37
4.1	The grid	37
4.2	The coronagraph	39
4.2.1	Increased resolution	42
4.3	Scanning	43
	Conclusions and Future Work	48
	Bibliography	50
